

Declaration of Safety

AMS Hard-TEF

Disclaimer

This English version of the document is provided for information purposes only. In the event of any discrepancies or inconsistencies, only the German version shall be legally binding.

Our hard chrome coatings do not contain any chromium VI compounds.

In electroplating technology, metallic chromium is deposited electrolytically from a chromium VI-containing solution.

The AMS Hard-TEF coating consists of white polytetrafluoroethylene with FDA Nos. 175.300 and 177.1550.

As we also do not use any chromium VI compounds or other substances pursuant to Directive 2000/53/EC or the VDE list during mechanical post-processing, we are able to issue this declaration of safety.
